## Interplay-sports analyzer PRO

### INTRODUCTION:

The Interplay-sports **analyzer** is the core module in the **Interplay-sports Video Content Sports Management System**. It is the professional, easy to use, flexible and extendible video analyzer software developed with Microsoft.net software technology.

The **analyzer** has been developed to give instant and accurate feedback on tactical situations for the team and the player. In addition it is an excellent tool for reviewing and highlighting technical details.

Visit our website at [www.interplay-sports.com](http://www.interplay-sports.com) to learn more about the Video Content Sports Management System and all Interplay-sports software products.

Typical customers are clubs, national teams, sports universities, coaches, players and agents. There are also solutions for Internet and broadcast companies.

The Interplay-sports **analyzer** is made up of five modules which are:

- Capture (the making of digitalized video clips)
- Play Back / Edit (editing, adding or removing tags made to the video clips)
- Show Room (Picking out situations and clips you want to present)
- Presentation (Viewing of the selections you identified in the Show Room)
- Compare Video (Side by side comparison of video sequences)
- CD Maker (Burn selected video clips and tags or burn the whole game for distribution. This module also converts the file format for optimal streaming)

### CHARACTERISTICS:

- Flexible setup of analysis variables
- Flexible recording and editing functions
- Supports the latest multimedia-technology from Microsoft and other leading companies
- Flexible input sources
- DV camera & VCRs, supporting Firewire or USB 2.0 interfaces
- Supports all kinds of Windows Video Capture cards and analogue-to-digital converters
- Flexible video quality - from full Broadcast/DVD quality to all streaming qualities
- Flexible storage - CD, videotape, DVD, local or central storage
- The system is designed for the ultimate ease of use
- You can use a mouse or short keys or a combination when doing the analysis
- The analysis may be executed on different levels – from basic, with few variables, to a comprehensive analysis of both match and player in real time.
- The user is free to choose his own variables to adapt to the preferences of the coach and the club
- A special shot and goal module is available for ice hockey and handball
- The analysis may be done in real time during the match, attached to a camera or a TV, or afterwards from all sorts of video sources
- Storage of the analysis may be done locally, or in a network where numerous PCs may share the data
- The player and match analysis is closely integrated. This saves a lot of time with respect to making a full player or match analysis based upon an existing basic analysis

- The system provides quick and simple editing functions to correct typing errors
- You may record replay situations, and easily connect these to situations already recorded
- In retrospect, the user may add new situations, passes, tackles, parallel actions etc. into the analysis
- You may use full screen DVD-quality when doing playback of the analysis
- Supports multiple video inputs. For example, several cameras
- Import and export function of games analyzed with Interplay-sports software
- Ready to use with the Internet
- Easy to adapt statistics and reports to screen or paper
- One button feature to create your own CD copy. Useful for players and coaches
- Made specifically for team and individual sports.
- Requires Windows 2000 or Windows XP operating systems, minimum 256RAM, P4 processor, 20GB disk and 32MB Video RAM.

*Live capture from Ice hockey*

*Compare video sequences*

*Make your own CD and distribute it to your players*
