ADDITIONS TO YOUR NOTEBOOK

- Virus Control & Personal Firewall
- 3 years warranty (most of these pc comes with a 1 year warranty, but can very easy be extended to three years. Ask your dealer)
- EXTERNAL MOUSE – makes your analyze easier
- BACK-PACK – Case to protect your pc

ADDITIONS IN ORDER TO DIGITALIZE FROM VIDEO PLAYERS, DVD PLAYERS OR TV

You will need to have a Media converter to convert your analogue signal to a digital signal into your PC. Our recommendation is:

ADVC110
Advanced Digital Video Converter

High-quality Bidirectional Analog/Digital Video Conversion

Use ADVC110 to connect all analog and digital video cameras, decks and editing systems. ADVC110 is a portable and easy-to-use digital video converter compatible with Windows and Mac OS computers. ADVC110 is the ideal device for capturing and outputting analog video from any FireWire-equipped notebook and desktop computer. There are no drivers to install and ADVC110 does not require a power supply when used with a 6-pin FireWire cable.

ADVC110: Key Features

- Connects to all widely used DV and analog video equipment
- Compatible with Windows and Mac OS DV editing systems
- Compatible with leading editing and DVD authoring applications including Canopus EDIUS, Canopus Let's EDIT, Final Cut Pro®, Adobe® Premiere® Pro, Vegas®, iLife®, Ulead MediaStudio® Pro, and Windows® Movie Maker
- Audio-only conversion support
- No need to install drivers or any software applications
- Powered by IEEE 1394 FireWire connector*
- NTSC and PAL compatible
- Color bar reference signal generator

* The ADVC-PSU5V AC Adaptor Kit (sold separately) is required when connecting ADVC110 to a 4-pin IEEE 1394 FireWire port.

Intelligent Input/Output

ADVC110's intelligent usability allows for easy setup and connection in any video environment. Front and rear connectors provide analog and DV signal pass-through and ensure that connecting cables is neat and simple.

ADVC110 Front

ADVC110 Rear

ADVC110 also features a color bar reference signal generator to further enhance its integration into any video production environment.

CABLES AND CONTACTS

On the most commonly used equipment in video analysis you find these contacts;

- Internal fire wire contacts on a notebook is of type 4 PIN
- External fire wire contacts through a PCMCIA card is of type 6 PIN
- Fire wire contact on a video camera is of type 4 PIN
- Contacts from old video recorders, DVD players or TV monitors connects to a media converter through a SCART contact and a RGB cable.

Examples

- From a video camera with a fire wire contact to a notebook with a video camera you need a direct connection through a 4pin to 4pin cable.
- From an analogue source through a media converter and to a PC with internal fire wire you need:
 - SCART plug and RGB cable from the analogue source to the media converter
 - 6pin to 4pin cable from the media converter to the PC
 - If the PC has an external fire wire contact the 6pin to 4 pin cable is replaced with a 6pin to 6 pin cable.

VIDEO CAMERA AND ACCESSORIES

It is important that if you consider to buy a video camera and you also want to have the possibilities to do the video analysis live (When the game is done you are done) then you need to select a video camera with fire wire out contact. This camera has that.
